DETAILED ACTION

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 11 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claim 11 is drawn to a “computer program” *per se*, therefore, fail(s) to fall within a statutory category of invention.

A claim directed to a computer program itself is non-statutory because it is not:

A process occurring as a result of executing the program, or

A machine programmed to operate in accordance with the program, or

A manufacture structurally and functionally interconnected with the program in a manner which enable the program to act as a computer component and realize its functionality, or

A composition of matter.

See MPEP § 2106.01. Data structures not claimed as embodied in computer readable media are descriptive material *per se* and are not statutory because they are not capable of causing functional change in the computer. See, e.g., *Warmerdam*, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure *per se* held nonstatutory).

Such claimed data structures do not define any structural and functional interrelationships between the data structure and other claimed aspects of the invention, which permit the data structure's functionality to be realized. In contrast, a claimed computer readable medium encoded with a data structure defines structural and functional interrelationships between the data structure and the computer software and hardware components which permit the data structure's functionality to be realized, and is thus statutory. Similarly, computer programs claimed as computer listings *per se*, i.e., the descriptions or expressions of the programs are not physical "things." They are neither computer components nor statutory processes, as they are not "acts" being performed. Such claimed computer programs do not define any structural and functional interrelationships between the computer program and other claimed elements of a computer, which permit the computer program's functionality to be realized.

Allowable Subject Matter

Claims 1-10 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Re claims 1-8

The prior art of record alone or in combination does not teach or suggest the method of recording a set of data having the combination of steps with their recited

process, along with ordering that an area be reserved, if the handling scheme is arranged to write data in at least one other space before the identified available space, which area corresponds to said other space for dummy storage data (50), as set forth in claims 1-8.

Re claims 9 and 10

The prior art of record alone or in combination does not teach or suggest the device for recording a set of data having the combination of elements with their recited functions, along with order the storage medium handling scheme to reserve an area, if the handling scheme is arranged to write data in at least one other space before the identified available space, which area corresponds to said other space for dummy storage data (50), as set forth in claims 9 and 10.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Van Den Enden et al. (7,355,937), Motohashi (7,336,579) and Mine et al. (5,978,336), all disclose a recording apparatus capable of detecting unrecorded locations on the recording medium and also the ability of recording dummy data in the unrecorded locations.
